FOR IMMEDIATE RELEASE

Wayne County, PA Continues Use of CodeRED Emergency Notification System

WAYNE COUNTY, PA – Wayne County continues to utilize CodeRED, a high-speed emergency notification service provided by OnSolve, LLC, as its official mass notification system. This robust system plays a vital role in the County's emergency communication strategy, delivering time-sensitive alerts to residents, businesses, and visitors.

CodeRED is used to send emergency messages through phone calls, text messages, emails, and social media platforms. The service delivers critical emergency alerts, with a primary focus on severe weather warnings, as well as notifications for events such as evacuations, hazardous conditions, and other public safety threats. The system's reliability, accuracy, and speed ensure that critical information reaches the public when it matters most.

To enhance severe weather preparedness, Wayne County has also enabled automated National Weather Service alerts through CodeRED. These alerts are pushed directly to subscribers' phones, ensuring timely warnings about tornados, flash floods, and other hazardous conditions.

Residents are encouraged to register for this free service to receive alerts through multiple channels.

 Registration is quick and easy: Visit: https://waynecountypa.gov/393/Emergency-Management Click: Code RED. Additionally, users can download the CodeRED Mobile Alert app from the App Store or Google Play. The app enables geo-targeted notifications, which are especially valuable for travelers and those away from home during emergencies.
